Mobile Scan 06

Intelligent Capture 07

Overview

CAPTURE

Capture any physical or electronic documents from a mobile scan app, mailbox, email inbox or file transfer.

INDEX

Our Intelligent Capture application automatically extracts data off of captured documents and validates them with over 90% accuracy.

PROCESS

Whether you're sending out invoices or processing payments, we make it easy to collate the necessary documents and approve purchases.

ARCHIVE

Store files in a secure, compliant environment with Paperwise Document Management. Our system uses a proprietary security model, versioning and unique user permissions to ensure document integrity.

Integrated With Your Applications

For the past 30 years, we've built partnerships with over 50 different software companies to provide you with the complete solution you need to effectively and efficiently run your business.

KEEP YOUR DATA SECURE WITH A COMPLIANT DATABASE

The Paperwise imaging solution uses its own security model to make sure your data stays protected and secure from any threat. The model works by adding security restrictions to users, individual pieces of data and content groupings simultaneously. It also restricts the modification of documents unless documents are resubmitted to the system, which protects data integrity and creates a natural audit trail.

CONTROL HOW INFORMATION MOVES THROUGH YOUR OFFICE

Paperwise imaging is an end-to-end information processing and archival solution that puts you in control of how information is captured, who has access to sensitive data and how it all moves throughout your office. From the beginning, the system captures any type of data and makes it available to individuals for processing. You then have the option to dictate how information flows and is stored within the system.

Ensure you're in control of your data.

Not the other way around.

MAKE DATA EASILY ACCESSIBLE FOR YOUR EMPLOYEES

We make locating key information simple with strict and enforceable indexing standards. That lets you dictate not only where information is stored, but also what it's called. Because your corporate standards are built into the system, all of your data can be easily found through simple keyword searches.

Improve efficiency, confidence and control by implementing a document management tool that brings together more than just data.

The Paperwise imaging solution is designed to allow you to intelligently integrate with the software applications — like TMW, McLeod, Microsoft Great Plains, etc. — you already use every day to break down the data barriers.

Our intelligent integrations are designed to tie your

corporate systems to one central repository. This reduces the time it takes for your employees to find information with single-click index and search, improves data accuracy by pulling it directly from a management system or other business application and eliminates unnecessary software barriers.

Document Portal

Paperwise Document Portal is a way for your drivers, your customers and your carriers to access key pieces of information about their transactions with your business. This mobile-responsive web application provides 24/7 access to all of your business-critical information from any device, anywhere.

24/7 access to your business-critical information anytime, anywhere, on any device.

DRIVER PORTAL

The Paperwise Driver Portal allows all of your company drivers and owner-operators to access their settlements or pay stubs and upload any HR documents or certifications you need to complete their Driver file.

CUSTOMER PORTAL

The Paperwise Customer Portal provides clear evidence to your customers of the transactions they've initiated with your company, the invoices they've already paid and the invoice packets they still have to review. This web portal allows for customer self-service, so that your admin staff aren't constantly answering customer questions.

CARRIER PORTAL

The Paperwise Carrier Portal for Logistics departments and companies works to eliminate as much of the interline payables waiting period as possible. It allows carriers to see your past transactions and monitor payment statuses without having to call your accounting department.

Mobile Scan

The Mobile Scan app provides a way for your drivers to quickly and easily send you the trip documents you need to process trips, send invoices and get paid. But it does more than just send. Our user management and integrations feature turn a standard mobile scan application into a robust driver management tool.

USER MANAGEMENT

The Paperwise user management tool allows you to dictate:

- What features drivers can access
- The information they need to submit for any given load

All of this configuration is done on a driver-by-driver case, and ensures you get what you want, when you want it, without having to sort through a document dump.

INTEGRATIONS TO TMS

With integrations to leading management applications, we pull data directly from your TMS. That means for your drivers, we know:

- What load they're on
- Who the customer is
- What documents that customer wants in their trip packet

Then we prepopulate that information, so your drivers can just take a picture and send.

Bringing intelligence to mobile scanning.

Intelligent Capture

Our solution automatically identifies, classifies and extracts business-critical data from all of your trip documents using a patented supervised learning technology. Paperwise Intelligent Capture is a zero footprint, browser-based application that runs on servers in the cloud, which makes it easy to deploy and easy to use.

THE SOLUTION

More than 80 percent of business information is stuck inside PDFs and scanned images – Paperwise Intelligent Capture makes that data actionable. With smart document capture and document classification features, this application extracts meaningful data from any document or image in any format either in the cloud or on-premise. That extracted data then feeds into your back-office applications to accelerate business transactions and processes

PAPERWISE ADD-ONS

Mobile Capture

Use smart phones to input documents and data into the Intelligent Capture software.

Imaging

Securely store and organize your business information in an imaging system connected to your TMS.

Document Portal

Allow drivers, internal staff members and customers to see their documents or data. No licenses required.

Benefits of Intelligent Capture

Software that learns from experience

Recognizes, sorts and extracts data from unstructured documents, while simultaneously validating it faster than any employee.

No intensive IT Setup

Compatibility issues are a thing of the past. Our Intelligent Capture software works on any of your preferred browsers – Chrome, Internet Explorer, Safari or Firefox.

Increase productivity

Employees are now free to devote their time and resources to higher level, value-driven tasks.

Eliminate human error

Eliminate the risk of human error that's inherent in labor-intensive manual tasks with a supervised machine-learning software that does them for you.

Eliminate random processing errors

Prevent inconsistencies and keep processes predictable, auditable and timely.

Leverage existing investments

Intelligent Capture is an open source software, so it can easily integrate into your existing TMS or Imaging system using Web Services APIs.

Flexible pricing options

The Paperwise licensing model provides options for unlimited scans or transactional scans. Choose which solution best fits your business process goals.

Real-time insight and analysis

Make more informed business decisions with instant visibility into key performance indicators and metrics.
